Quality Pediatric Care

The Laerdal Paediatric Pocket Mask makes CPR on pediatric patients safer. With the low resistance one way valve, and circular silicone mask for pediatric features, providers can provide better, safer CPR to pediatric patients. The Laerdal Paediatric Pocket Mask is an excellent companion for providers that often come in contact with infants and children.

Children are not just small adults

The Laerdal Paediatric Pocket Mask has been specially constructed to provide a tighter seal with pediatric faces. The distance the mask creates between patient and provider also allows providers to visualize chest rise and fall, for better CPR. The Laerdal Paediatric Pocket Mask comes in a soft pouch with a belt strap and clip that enables providers to be ready whenever emergency pediatric care is needed.

Specifications

CE marked - This product is in conformity with the General Safety and Performance Requirements of EU Regulation 2017/745.

Technical

- Material: Silicone (mask), PC (valve)
- Deadspace: 90.5 ml
