

Laerdal Pocket Mask

Protects both the patient and the rescuer

A Reliable and Proven CPR Device

Laerdal is continuously developing CPR barrier solutions that protect and help both the patient and the rescuer. The introduction of the world's first folding Pocket Mask in 1969, marked the beginning of this journey. The Laerdal Pocket Mask's design, filter, and one-way valve make it a quality choice that provides protection during CPR.

High-quality Technostat filter

The two-sided Technostat T-150(+) filter has low air resistance and high dust-holding capacity and filters out contaminants in the air being transferred between the rescuer and patient.

Viral and bacterial filtration efficiency tests proved that 99.99% of aerosol particles were filtered at the mean particle size of 2.7 μm .¹

One-way valve

Decreases risk of backflow or contamination during ventilation.

Reusable

The Laerdal Pocket Mask is tested to withstand a minimum of 20 cleaning cycles without degradation or loss of performance. This durable product allows storage of up to 5 years before being used.

Being a reusable product reduces waste and saves both organizational and environmental resources in the long run.

Note: Image shows the Pocket Mask option without O₂.

Lightweight and Foldable

Making it easy to use², transport, and store.

Transparent material

Helping rescuers to see patient's lip color and identify the need to clear the airway if bodily fluids are present in the mask.

Can be used on adults, children, and infants

For use on an infant, the mask may be turned 180° to achieve a better seal.

The Pocket Mask is available in a variety of options for your convenience

Packaging: Hard case

Packaging: Soft pouch

These include:

- Packaging options (hard case, soft pouch with a belt loop, or polybag)
- Incorporating an oxygen inlet that facilitates the delivery of supplemental oxygen (includes elastic head strap)
- Different sizes (Pocket Mask also comes in a dedicated Pediatric version)
- Personalization (labeling for branding or identification purposes)
