## Flexible for an airtight seal

Depending on the shape and size of your patient, there is a Laerdal Silicone Mask that fits. An airtight seal between the skin and the silicone enables the proper administration of air. The Laerdal Silicone Mask is completely transparent for visibility of the patient's nose and mouth, fits standard 15/22 mm connectors. The size 4-5+ and 3-4 masks fit with the Multi-Function Mask Cover.
